Color schema based on the change over 2007 ■ <=0% ■ >0%

For the whole of USA, increase in Population in 2012 over 2007 was 4.2%. Harvested Cropland Change in Acreage from 2007 was 4.4%. With a 0.5% population growth and reduction in number of farms every year, there will be huge pressure on increasing the harvested cropland area. Highly Populated Counties overall seem to be having a reduction in the number of farms from 2007, but the Harvested Cropland Change in Acreage 2007-2012 and other Crop/ Produce specific change still seems to be holding up over 2007.
